Please use the following instructions to maximize ease of tagging and for correct ear placement.

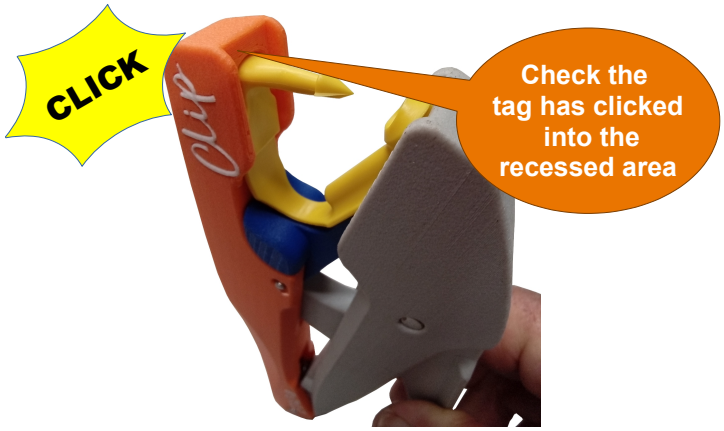

Warranty will be void if placed incorrectly.

Note:

We recommend **using a disinfectant**, particularly in **humid weather**. Either pre-soak or dip or spray prior to application.

Ensure the livestock are adequately restrained, preferably in lamb cradle or body clamping equipment.

Whilst tagging in **Very Hot Weather**, keep the tags out of direct Sunlight.

Loading the Applicator

1) Hold the tag nearer the pin as shown.

2) Hold the applicator as if your going to tag with the jaws pointing away from you.

3) Locate the Tag centrally in front of the jaws between the guides as shown below.

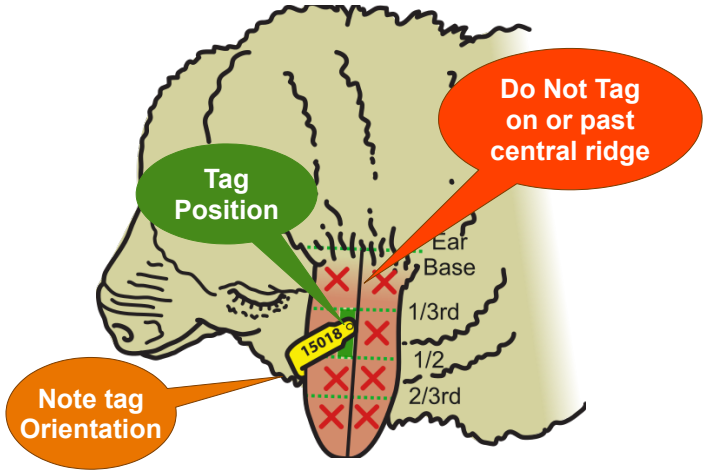

4) **Pull** the centre of the tag into the **Applicator Jaws**.

Applying the Tag

5) **Apply** the tag a **third to half way** from the ear base.

a) **Lambs at lamb marking in cradles:**

Apply the male tag section in front of the ear as the animal faces you. Position the tag between the third to half mark from the ear base. **Do not tag on or over the central ear fold.** Apply as shown below, avoiding the “red zones”.

b) For weaners and ewes, when tagging down the race or with aid of body clamp equipment:

Apply the tag from the front of the ear and position the tag on the green zone as illustrated.

Any questions, please call us or checkout the resources section on the website.

ENDURO TAGS

Innovative Livestock Identification

1) The "2 in 1" tag
- NLIS EID functionality
- Great management features

2) High performance and durable transponders
- quick to read & robust glass tube transponders

3) Excellent retention performance
- no catch points on male spike and tag junction

4) Excellent draft tag
- adequate tag body width for visual ID and drafting

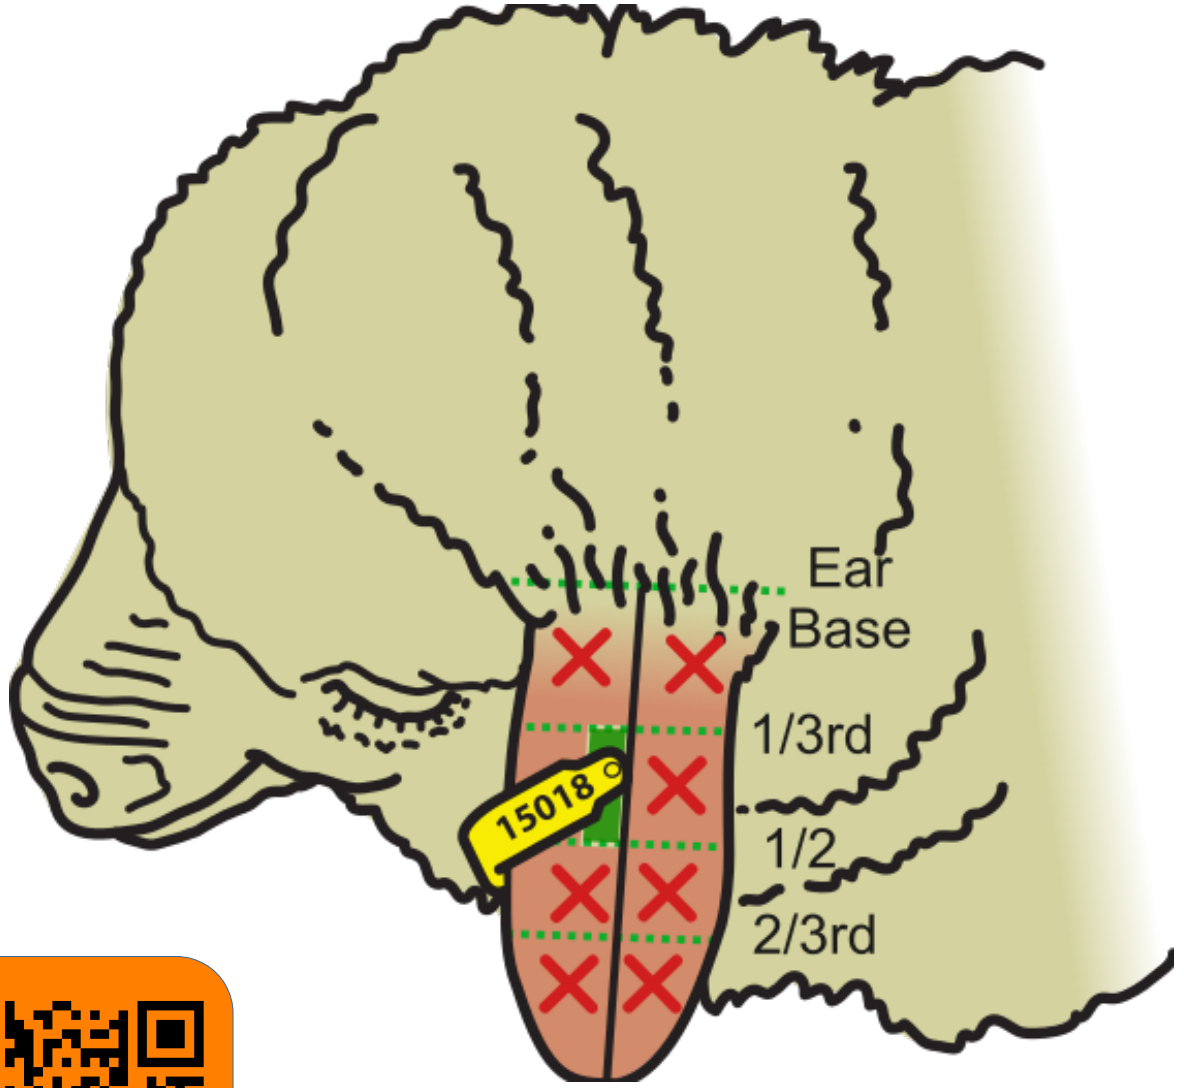

5) Infection
- trial results show extremely low infection rates (1 out of 4500 tags applied)

6) Application
- simple tag loading with easy to see placement
- sharp spike/pin with sharp cutting edges

7) Enduro Clip Tag and applicator are designed to readily Apply to all Age groups.

Tag Placement is in the Green Zone only
