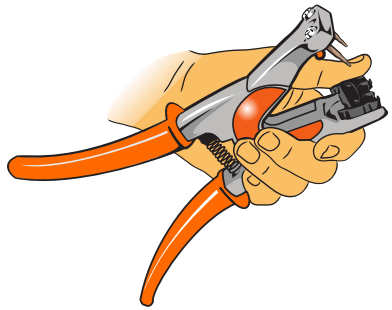
Please read and follow the instructions to maximise ease of tagging and for correct ear placement.

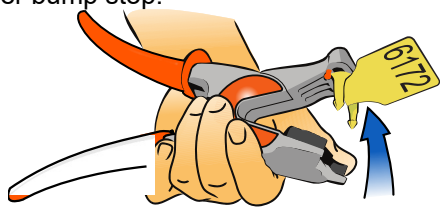
Note: all our tags are applied with the applicator in vertical orientation and best to apply from the front of the restrained animal.

Loading the Applicator

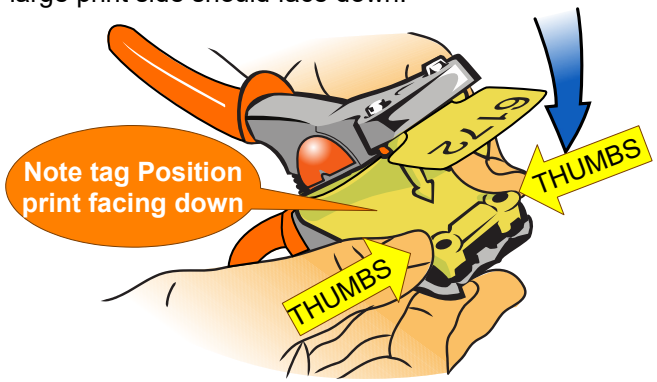
1) **Hold** the applicator in one hand, supporting **under the tagging head**



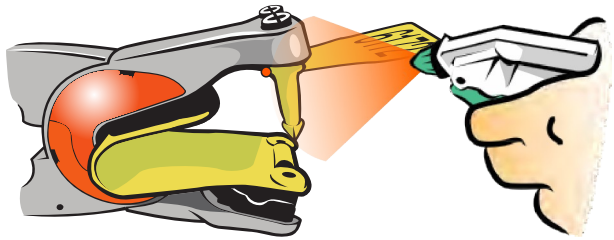
2) **Push** the **male tag** onto the applicator pins so the tag is up and out of applicator jaws and the double pin lock onto rubber bump stop.



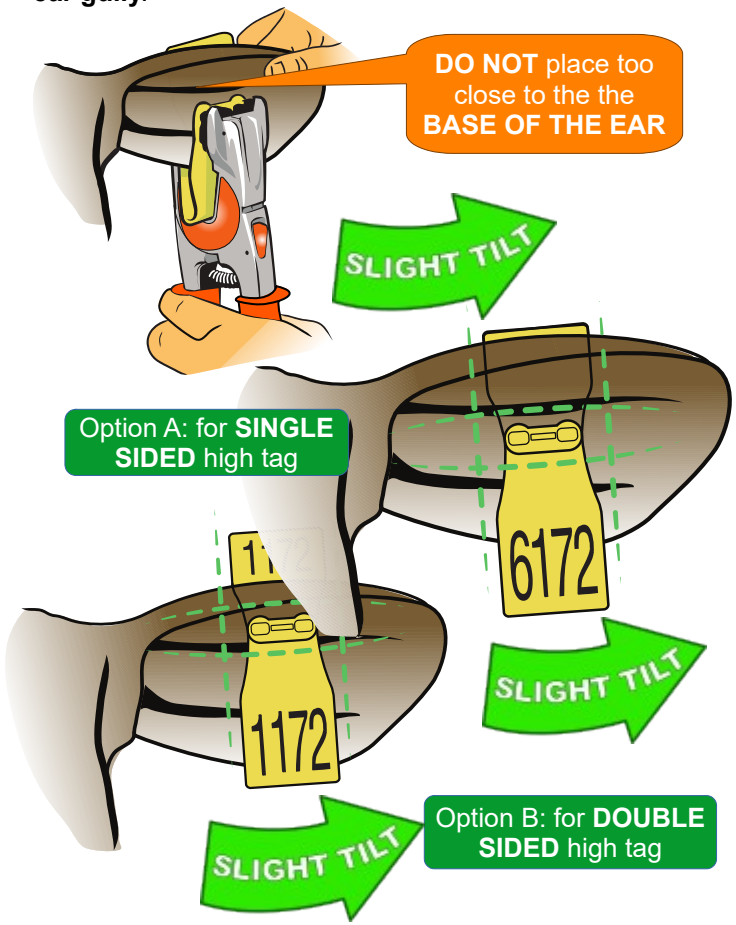
3) **Fold** the **female tag** at it’s base and **insert** inside the applicator jaws, and using **both thumbs**, **pushing firmly** the locking caps into the tag block cavities. The large print side should face down.



4) We recommend spraying 4% betadine or other antiseptic solution on the male clips, especially in **humid weather.**



5) Tag placement is important for retention. All tags are **placed parallel to the length** of the ear, within the middle ear gully. **Slightly tilt** outer tag pin up in the gully especially for maxi tags, as this applies them straighter. **High Double Sided Tags** sets are applied to the **upper ear gully**.



Any questions, please call us or checkout the resources section on the website.

ENDURO TAGS

Innovative Livestock Identification

We continue to improve our tags through innovation and customer feedback

1) Retention through design

- double pin clips
- minimal catch points
- double locks

2) Standout tag visibility

- wider neck tags
- stay centrally fixed
- “High Tag” options

3) Stay cleaner

- tags have shiny non-stick surface
- minimises dirty/dusty tags

4) Dark laser print

- laser burns into the tags
- wide range of tag print options

5) Transponder technology

- ear tag placement orientation optimises eID reads.
- quick responsive reads
- excellent transponder durability.

6) All Australian

- designed, trialled and proven
- Australian owned, manufactured in Victoria
- fast turn around times

7) Proven Longevity

- nylon male clip tag
- strong and robust
- UV stabilised

8) A lifetime replacement warranty

W73mm x H116mm

ETF6 Maxi Long Tag

This is a super tag with extra-long length and maxi width designed for standard or extra-large print. When placed in the upper ear gully, offers the best retention and for use with our double-sided print High Tags. Designed to be applied on more mature stock, it provides cattle breeders with a tag that has strength, durability and longer distance tag visibility.

Livestock Tag Applicator

This is a quality Australian Made alloy livestock applicator, especially designed for use with our unique two pin livestock tags. The applicator can be configured to work with the Sheep tags or the Cattle tags, It is easy to change with a large common screwdriver and small phillips screwdriver.

Combo 30 Enduro NLIS Cattle Tag

The Combo 30 maximises your retention. The nylon male tag is highly durable and evidence shows highly functional in the field for 10 years. This ensures long term retention with loss rates of 1% or less per annum according to our producer’s The Nylon is inert so minimal ear infections.

Ideal for all breeds of cattle including dairy cows where eID reads are constantly required. Well suited and utilised by many producers in all scrub country, open grazing, high UV and both humid & dry environments.

This tag is readily applied to calves at marking, branding, weaning or to yearlings and heifers (and dairy calves at birth)

W73mm x H93mm

ETF5 Maxi Tag

Easy identification with maximum etch area for British/EU, Brahman and their crosses and is a popular dairy herd tag. The lower section of the tag clears the hair of the ear, allowing for better visibility of colour, serial and farm name. Can be used with the Economy, Large or Maxi Clip for reading from the back.

W73mm x H70mm

ETF4 Maxi Short Tag

Temperate, dairy and tropical cattle and holds a maximum sized serial number and 8-10mm property name. The tag is contained fully within the ear, with little or no overhang. Highly visible maxi tag especially for cattle with less ear hair.

W73mm x H71mm

ETM4 Maxi Clip

For application with our maxi female tags on young cattle with moderate ear growth and strength. It hangs down the back of the ear and is a maxi size, giving great tag readability. Used in more intense livestock enterprises.

Suitable for young growing cattle and beef breeders.

W57mm x H70mm

ETF3 Large Tag

Suits all cattle types and is readily applied to new born calves, or calves at marking or mustering.

A good size tag for young stock or shorter term cattle production and as well for breeders.

ETM3 Large Clip

Used in the majority of our tag combinations, and suits all cattle types and breeds. Great long term management tag for breeders.

It works particularly well with great visibility from any direction upside down as a “High Tag” option in dairy herds

W57mm x H62mm

W63mm x H46mm

ETF2 Medium Tag (Stock Brand Tag for the tropics & stations)

Provides excellent visual ID for all cattle. The tag is held well within the ear, doesn’t rotate and through design, expect losses less than 1% per year.

An ideal tag for tropical cattle to withstand rubbing, prickly weeds, scrub, humidity and sweat. Ideal for both yard and paddock visibility with 27mm print size & with property name/mobile. Equivalent flag area to large single pin tags.

W57mm x H45mm

ETM2 Medium Clip

For young livestock for shorter term visual management from the back of the ear.

Designed for beef calves or stud ewes.

ETF1 Small Station Tag

A very economical and high retentive tag as a year marker and property identification or age differentiation for station or large herds.

Also used for stud ewes and piggeries for breeder identification.

W46mm x H32mm

ETM1 Twin Pin Economy Clip

The economical double pin male clip component is designed to be coupled with all our double lock female tags. It provides the highest retention and recommended for all herds where tag retention, differentiation and visibility are important.
